

## Project Design Phase-I

### Proposed Solution

Date	01 November 2022
Team ID	PNT2022TMID26940
Project Name	Visualizing and Predicting Heart Diseases with an Interactive Dash Board
Maximum Marks	2 Marks

### Proposed Solution:

S.No.	Parameter	Description
1.	Problem Statement (Problem to be solved)	<ul style="list-style-type: none"><li>• The objective of this study is to effectively predict if the patient suffers from heart disease. The health professional enters the input values from the patient's health report.</li><li>• The data is fed into model which predicts the probability of having heart disease</li></ul>
2.	Idea / Solution description	<ul style="list-style-type: none"><li>• By predicting and visualizing the fundamentals Properties that are related to heart disease and visualizing them in a dashboard</li></ul>
3.	Novelty / Uniqueness	<ul style="list-style-type: none"><li>• Using the Naive Bayes algorithm we going to predict the heart disease at the maximum accuracy</li></ul>
4.	Social Impact / Customer Satisfaction	<ul style="list-style-type: none"><li>• Heart disease kills roughly the same number of people in the United States each year as cancer, lower respiratory diseases (including pneumonia), and accidents combined.</li></ul>
5.	Business Model (Revenue Model)	<ul style="list-style-type: none"><li>• This model may increase the accuracy of predicting and easy to understand the status of the patient even though they are not in a technical field</li></ul>
6.	Scalability of the Solution	<ul style="list-style-type: none"><li>• This algorithm helps to increase the accuracy and reduce the time consuming to process the data. It achieves the accuracy of 95%</li></ul>
